

Proven Mettle in Steel

Tata Steel, India's largest private sector steel producer, is shifting to greener technologies. The coke dry quenching technology (CDQ) offers better heat recovery, water conservation and zero air and water pollution. Yet another first for one of the world's least cost steel producers.

Large reserves of high grade iron ore and sustained growth in manufacturing, automobiles, construction and infrastructure are attracting fresh investments from both domestic players and global majors.

According to the National Steel Policy 2005, additional steel production capacity of 110 million tonnes will be created over the next decade. As of March 2006, the Government had approved FDI of over US\$ 26 billion towards setting up of new steel plants.
